About this Report

Having published this report for over 20 years, NBI/Michael Sone Associates' **Canadian Mobile Wireless Communications Services Market Report, 2016 Edition** continues to be the most comprehensive, independent study published on this industry.

The report examines in detail the mobile wireless market in Canada by focusing on numerous service provider metrics. Of particular importance are the increased prominence of data communications in all its forms, and the effect of that trend on service providers' revenues. Also, with two of the five new entrants having been acquired by incumbents, the report analyzes the role the remaining new entrants still have in fulfilling the government's policy of promoting increased market competitiveness.

The report opens with a Market Overview that offers the reader a snapshot of the industry's relevant issues, specifically the service providers' subscriber and revenue performance, market share, penetration and future direction as indicated by the key metrics of their subscriber acquisition and growth, segmented voice & data ARPU, usage rates and churn. It also examines the current state of the industry, its competitiveness and the growth in data consumption driven by the near-ubiquitous adoption of smartphones.

The next two sections contain concise, yet detailed, profiles of the wireless service providers including their recent market performance and activities as well as predictions for the future. Also included are forecasts of subscriber and revenue growth and the increasing role to be played by all forms of mobile data in in that regard.
