About this Report

Michael Sone Associates' **Canadian Fixed Wireless Communications Services Market Report, 2019 Edition** is the most comprehensive and rigorously researched document available on this sector and is the successor to our previous publications on Wi-Fi, Wi-Max and other fixed wireless technologies.

This report is divided into six sections. The first is an introduction that provides an overview and discussion of the Canadian fixed wireless market. This is followed by an examination in four sections of the technologies employed in delivering Wi-Fi and WiMAX/LTE services, and an introduction of the near-term 5G market development as it relates to the fixed wireless market, generally. The sixth section is comprised of a dozen different national and regional company profiles each elaborating on their businesses, technology choices and future plans regarding fixed wireless services.

Please note that the fixed wired and mobile Internet markets are examined and discussed in depth in Michael Sone Associates' **Canadian Internet Service Providers Market Report** and **Canadian Mobile Wireless Communications Services Market Report** respectively. Please refer to these publications for information on these market sectors.
